WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE & PHARYNGITIS, ACUTE
